

Bethesda, MD – April 13, 2007 – CADwire.net™, the leading information site for the CAD, AEC, GIS, EDA and PLM industries, today announced FreeDimension as the winner of its 2006 Tech Innovator Award.

FreeDesign introduced a unique 3D surface generating software called FreeDimension to the market last year. The FreeDimension application represents a radically new approach to surface generation in 3D models. The new technology enables designers to stylize 3D models intuitively, unburdened by the need for complex tools to create curved surfaces. With a remarkably easy user interface, the software quickly expedites what used to be the most difficult task in 3D models: the molding of natural-looking organic shapes, ergonomic surfaces, and rich three-dimensional textures.

This new freedom in design is possible because FreeDimension departs from the usual method of CAD surfacing, which uses NURBS (Non-Uniform Rational B-Splines). FreeDimension instead employs a new flexible technique of curve-creation called “n-sided” surfacing.

“While there were many amazing nominations for the CADwire.net Tech Innovator Award this year, we found that the introduction of FreeDimension stood out. It is a technology that holds a lot of promise to the field of product design,” said Rick Stavanja, Vice-President of Cyon Research and editor-in-chief, CADwire.net. “Considering the difficulty the CAD world has had in the past in creating and managing curves, FreeDimension can truly be called a breakthrough.”

FreeDesign, Inc, is headquartered in Longmont, Colorado. A free 30-day trial of FreeDimension software is available for download at www.freedesign-inc.com. The software is also now bundled with the popular mechanical solid modeler Alibre Design Professional.

“We are overwhelmed by all of the great response to FreeDimension this past year,” says FreeDesign CEO Dick Sogar. “It’s a wonderful surprise and an honor to be recognized by the entire industry in this way.”

The award will be presented during the COFES 2007 event in Scottsdale, AZ, April 12-15, 2007.

About CADwire.net

Founded in 1999, CADwire.net™ is a search engine and information resource providing market news and industry commentary. CADwire.net uses state-of-the-art technology to locate, organize, display, disseminate, and index CAD information.
