

Remarkably innovative product now available for free trial

Longmont, CO August 22, 2006 – FreeDesign, Inc. the creator of breakthrough 3D surfacing technology, today announced the release of a free 30-day trial of FreeDimension, now available at www.freedesign-inc.com.

FreeDesign has created breakthrough 3D surfacing technology, which enables users to quickly and intuitively create and stylize 3D models easily and with freedom. The underlying technology is ideal for quickly creating what used to be challenging 3D models – including organic shapes – with smooth surfaces and an easy user interface.

FreeDesign's product, FreeDimension, now also accepts import of .KMZ files from Google SketchUp and allows basic 3D designs to be quickly and easily developed into more organic and flowing shapes.

"The decision to offer a free 30-day trial of FreeDimension to users was an easy business decision," commented Dick Sogar, CEO, FreeDesign Inc. "Our product is all about having fun while designing great things. The 30-day trial, allows users to really see how easy and remarkable this product is, while also allowing them an outlet to discuss the things they enjoy about the product, or would like to see changed."

Tyrone Marshall, commented about FreeDimension after signing up for his free 30-day trial, "I am very impressed with this beautiful design tool. "I really like the pure manipulation of curves and the simplicity of the manipulation. I am really inspired to keep coming back to this software."

FreeDimension is based on the patent-pending N-Sided Surfacing (NSS) technology, which frees users from quadrilateral surfacing technologies like NURBS and Bezier surfaces. The NSS technology enables FreeDimension to present a curve-based interface to the user that more closely mimics the pencil and paper method of design, creating more freedom and innovation for designers in product development, industrial design, 3D gaming, entertainment and more.

FreeDesign's product FreeDimension is now available for a free 30-day trial at www.freedesign-inc.com.

About FreeDesign, Inc.

FreeDesign has created breakthrough 3D surfacing technology that is the foundation for the company's product FreeDimension. FreeDimension allows users to quickly and intuitively create and stylize 3D models using curve manipulation as in sketching. Initially targeted for concept design market, the underlying technology is ideal for creating challenging 3D models including organic shapes. The product uses patent-pending N-Sided-Surfacing, a new generation of 3D surface modeling that enables fast, flexible 3D shape modeling without the hassle and grind created by NURBS and Bezier-based systems.

FreeDimension is affordable, easy-to-use and once tried, designers will never want to move away from it!

FreeDesign is located in Longmont, CO, and a free 30-day trial of FreeDimension can be downloaded at www.freedesign-inc.com.
